

Soopor Chess

| Cyberpunk chess engine with optional perks

Concept

A chess implementation with non-standard rules through 5 unique one-time-use abilities (“perks”) that change gameplay strategy:

- **Pawn Sprint:** Advance pawn 4 squares on first move
- **Double Turn:** Take two moves per turn (excluding king/queen)
- **Pawn Recall:** Recapture piece when pawn promotes
- **Firewall:** Shield piece from capture for one turn
- **Scan:** Highlight opponent’s attack squares

Improvements Needed

☐

Add CPU difficulty levels (current AI uses basic scoring)

☐

Implement sound effects for check/move/perks

☐

Add mobile responsive layout for phone play

☐

Introduce “Classic” mode toggle

☐

Add 3D piece animations when capturing

Getting Started

```
python3 -m http.server 8090  
cd ~/Documents/Projects/chess-game && open http://localhost:8090
```
